North Shore Water Reclamation District

JOB DESCRIPTION

Title: Construction Engineer

Department: Engineering Services

Job Purpose Statement: Performs engineering work in the design, construction, maintenance and operation of water reclamation plants and collection system including collection and analysis of data and information for project scope development, preparation of contract documents, and bidding. Interface with Project Manager during construction phase of projects.

Reporting Structure: Supervisor of Design and Construction and/or Project Manager.

Job Functions:

- Supervise construction on wastewater treatment and collection system projects and provide quality assurance that completed work complies with the plans and specifications.
- Actively participate in all pre-construction meetings, site visits and evaluate existing conditions with respect to contract requirements and prepare minutes and /or comprehensive reports on job related meetings.
- Work closely with Engineering staff to understand project scopes and specifications and provide input prior to bid stage.
- Maintain accurate records and reports related to the projects.
- Act as point-of-contact and coordinate directly with general contractor and negotiate change orders.
- Monitor progress against accepted construction schedule and review the Contractor's progress reports. Assess the progress and inform the Project Manager in case of delay.
- Oversee field site activities and provide technical advice on construction and design.
- Discuss deviations from specified construction materials and procedures with Engineering staff.
- Regularly review and approve contract submittals and payment applications to contractors.
- Participate in contract close-out activities.
- Conduct regular progress meetings with the contractor and appropriate personnel and report on any issues, as necessary.
- Work closely with Operations staff to evaluate and provide technical advice on Capital project scopes at budget time.
- Other duties as assigned.
